WAREHOUSE MANAGEMENT WEB APPLICATION PROJECT

Requirements;

Users should be able to register for an account and log in.

Clients should be able to find a warehouse by taking a quiz for the best recommendations.

The app should allow users to search for available favorite saved warehouses.

The app should allow users to filter for available favorite saved warehouses by price.

Warehouse owners should be able to create offers that will be visible to their clients.

Owners should be able to update their offers and they can also delete them.

Users can delete and update information in their accounts.

The app should allow image upload for warehouse owners.

The app should allow Portable Document Format file download for clients about information about a warehouse.

Purpose;

The project is to aid user/clients find products in warehouses easily. This will be done with a short quiz to determine what the client wants.

The discover quiz will provide a list of warehouses with the products the user/client needs showing their prices and the user/client can save the warehouse in their favorites so they can get to benefit from the various offers created by their favorite warehouse in the future.

This project to help warehouse owners make their warehouses known to various customers. This would help them improve their profits at less cost on advertisement.

Expected outcomes;

There will reduction in money spent by clients while trying to find warehouses especially specific products.

There will be increase in profits by warehouse owners through almost no-cost advertisement.

The number of customers to warehouses shall increase exponentially as the warehouses shall be easier to find.

Constraints;

The main constraint of the project may be maintainability due to its complexity.
